

NWS ON THE WEB

The NWS is dedicated to providing the most up-to-date weather information to each and every community using the latest technology. Forecast offices are staffed around the clock with meteorologists performing a wide range of duties from issuing warnings on the most life threatening storms to the pleasant task of issuing a sunny day forecast. Once a warning or forecast has been issued, it is disseminated through numerous communication networks including weather wires, NWS Weather Radio All Hazards, and the Internet.

The award winning NWS Internet site is highly accessible to the general public. Nowhere else will you find such complete, in-depth coverage of your local weather. For any location in the United States, a network of 122 offices provides all your weather needs in a standardized, easy to navigate website. Whether you are seeking radar, climate, or forecast information, the site provides a one-stop shopping point. In addition to those features, every NWS internet site has a clickable weather status map. This map displays all current watches, warnings, statements, and advisories, quickly alerting you of any weather threats that may be occurring in your area. That's just the front page...

Your National Weather Service offices across Alabama continually work to improve the quality of the products we provide to our community. Using the newest technologies available, the NWS is now creating several new products, including the Multimedia Impact Briefings and Graphiccasts. Forecast challenges, uncertainty in a forecast, any upcoming hazardous weather, and significant changes in the latest forecast are all points that may be highlighted in the Graphiccasts and Multimedia Impact Briefings. These products are issued multiple times a day and can be found on the front page of each office's webpage. Shown below are examples of the types of graphics featured as part of the Graphiccast (left) and Multimedia Impact Briefings (right).
