

June 10-11, 2007: Widespread Large Hail in Western Minnesota

Thunderstorms developed in the mid-afternoon on Sunday June 9th across southwest and west central Minnesota, and would continue to re-evolve into the early morning hours of the 10th. All in all these moved very little. Large hail was the dominant threat from these thunderstorms, though heavy rain and flooding were seen in some places due to the slow movement of the thunderstorms. Over three and a half inches of rain fell in northwest Lac Qui Parle County. The widespread hail at times was so persistent that it covered the ground. Because of the time of year being early in the maturation cycle of many crops, namely corn, significant damage was experienced to farm fields in west central Minnesota during this event.
