

# March 10, 2014 08:30 Teton Flooding SitRep

## *Narrative*

No additional reports of flooding have been received. Sandbag stockpiles appear to have been lightly used over the weekend with a handful of people taking advantage of them. NWS has shifted the precipitation forecast from rain to more of a rain/snow mix. The State Operations Center (SOC) has been stood up for flooding across the State. They are currently activated for 12 hour day shifts, with Duty Officer available 24/7.

This will be the final situation report for this flooding event unless conditions change significantly.

## *Summary of flooding reports in Teton County/Town of Jackson from 10:00 3/9/14 – 08:30 3/10/14:*

No additional reports of flooding received by Emergency Management.

## *Summary of actions being taken:*

- Emergency Management is requesting and recording reports from the public experiencing flooding to see if there are any “hotspots” in the County/Town.
- Emergency Management is working with the National Weather Service to ensure they are aware of ground-truth reports of flooding and is assisting them with development of flood statements.
- Emergency Management is providing Situation Reports (SitReps) to the State Operations Center (SOC) to help provide them with situational awareness for prioritizing resource needs across the State. It still appears that Washakie County and Bighorn Counties are the hardest hit with flooding at this time, with Lincoln being the third hardest. My estimate is that Teton County is likely the 4<sup>th</sup> priority in the State with our current situation.
- Teton County Road & Levee and TOJ Public Works have both made sand and sandbags available to the public. Our County stockpile sits at approximately 29,000 bags.
- Emergency Management is working with the Teton Conservation District to make the public aware of consulting services that they can offer to those experiencing flooding to help with soil erosion and flood protection.
- Emergency Management is posting relevant press releases and flood weather information to TCEM Facebook and Twitter pages.
