

# Data Acquisition Program Manager (DAPM)

---

The DAPM supervises a technical staff in activities which can be divided into three major categories: Data management and acquisition, public service and user interaction and forecaster assistance. The incumbent supervises a technical staff comprised of three or four hydro-meteorological technicians or interns. The DAPM schedules these employees, makes work assignments, assigns work priorities and adjusts work as necessary. The DAPM evaluates the work performance of the technical staff, counsels employees concerning their performance, conduct and work progress, evaluates their training needs and recommends significant personnel actions. An office has a DAPM or Observation Program Leader (described on next page), not both.
